ABSTRACT

This Kids Count data book examines statewide trends in the well-being of Illinois' children. The statistical portrait is based on 24 indicators in the areas of family, health, safety, education, and economic security. The indicators are: (1) living arrangements for children; (2) teen births; (3) children in foster/substitute care; (4) foster children placed in permanent homes; (5) early intervention enrollment; (6) health insurance enrollment; (7) infant mortality; (8) percent of low birth weight babies; (9) asthma hospitalizations; (10) children who contracted vaccine-preventable diseases; (11) child abuse and neglect; (12) child deaths; (13) lead poisoning; (14) Head Start and Pre-K enrollment; (15) number of licensed child care providers; (16) class size; (17) per-pupil spending; (18) graduation rate; (19) self-sufficiency standard; (20) affordable housing; (21) children in poverty; (22) median household income; (23) families and children receiving TANF; (24) child support; and (25) students eligible for free and reduced lunch. The first part of the report explores the changing family, highlighting children's oral health, insurance costs, school readiness, earned income tax credit, and teen REACH program. Sources, definitions and endnotes follow. The bulk of the report presents data tables for each indicator for the state, the counties, and the city of Chicago. The report concludes with supplementary Web tables, the Charter for Illinois Children, acknowledgments, and list of advisory committee and board of directors members. (SD)

Supporting the Changing Family

Voices for Illinois Children, founded in 1987, is a statewide, non-profit, non-partisan group of child advocates who address problems faced by Illinois children and their families. Through policy analysis, public education and outreach, Voices generates support from civic, business and community leaders for cost-effective and practical proposals to improve the lives of children. Voices receives no government funding and is solely supported by donations from individuals, foundations and corporations. Jerome Stermer is the president of Voices for Illinois Children and Lorraine Barba is chair of the Board of Directors.

Our Mission:
Voices for Illinois Children champions the full development of every child in Illinois to assure the future well being of the people of the state. We work with families, communities and policy-makers to ensure that all children grow up healthy, nurtured, safe and well educated.

"Illinois Kids Count 2002: Supporting the Changing Family" was funded by the Annie E. Casey Foundation's KIDS COUNT project. Voices for Illinois Children compiled the data and wrote the report.

OVERVIEW

Illinois Kids Count 2002: Supporting the Changing Family

The typical Illinois family is changing. Like much of the country, we are becoming increasingly diverse in race, ethnicity and family composition. We are living in different places and different kinds of communities than we were just a decade ago. And as we change, so do the challenges that face families, communities and the state as a whole. If we want to change the future for Illinois children, we must improve the present for their families.

The children of Illinois echo the changes occurring in the overall population. They are a diverse group: Less than three-quarters are white, one-fifth are black and nearly one-fifth are Hispanic. More than 3 percent are of two or more races. They also are a growing group—the number of Illinois children age 17 or younger increased 10 percent from 1990 to 2000, reaching more than 3.2 million. More than 232,500 children were born in 1999 alone.

Our children are growing up in a range of family settings. Sixty-seven percent of children are living with their own married parents. Eighteen percent live with a single mother, 4 percent live with a single father and nearly 7 percent live with a grandparent. More than 28,000 Illinois children are growing up in foster or substitute care. The prevalence of grandparents raising grandchildren—as well as children growing up in single-parent families—creates unique challenges for caregivers, service providers and community and government leaders.

Our children are increasingly growing up in urban and suburban settings. Many of their families

are leaving the small towns and rural areas of Illinois and settling in larger metropolitan areas, especially the six-county Chicago metro region, which grew 11 percent from 1990 to 2000 and now is home to 8 million people, about two-thirds of the state's total population. McHenry and Will counties alone grew by more than 40 percent each the past decade. That contrasts with a nearly 10 percent population loss in southern Alexander County and a more than 6 percent loss in nearby Edwards, Gallatin and Hardin counties. Regardless of where children and their families live, we must make sure their voices are heard.

"Illinois Kids Count 2002: Supporting the Changing Family" provides a look at the quality of life for children in Illinois and in each county. Children are defined as age 17 and under, unless otherwise noted.

Illinois Kids Count shows that more babies are living past their first birthday and fewer are being born to teen mothers. More children are eligible for publicly funded medical care. More teens are graduating from high school, and school attendance remains high and steady. A growing number of children in foster and substitute care are finding permanent families more quickly. Fewer children and families are receiving welfare and fewer children are growing up in poverty.

While these are encouraging signs, Illinois Kids Count is a snapshot of one point in time in the lives of our state's children. Conditions that affect their lives are already changing as the economy falters and personal safety is questioned. It is in times such as these that family takes on renewed significance.

The statistics in Illinois Kids Count are organized to reflect the focus areas of the *Charter for Illinois Children*, a statement of a common vision and goals for the state's children in six key areas: family, education, health, safety, economic security and arts, recreation and culture. The *Charter* is an enduring vision that has been embraced by hundreds of people across Illinois, a motivating force that will be sustained regardless of changes in the political or economic climate. The text of the *Charter* begins on page 134.

This year, Illinois Kids Count presents many statistics over a longer period of time, allowing us to identify trends and look for areas of significant progress and areas where much work remains. New indicators include foster children placed in permanent homes, asthma hospitalizations, Early Intervention system enrollment, vaccine-preventable diseases, lead poisoning, graduation rate and average class size. Race and ethnicity of children and children's living arrangements also are provided.

Where available, statistics on the State of Illinois page are broken down by race and ethnicity.

Additional data can be found on Voices for Illinois Children's Web site at www.voices4kids.org, and a list of the supplemental Web tables is on page 133.

While there are encouraging signs of improvement in the lives of Illinois children, we must remember that we are not where we want to be as a state. If we are truly dedicated to the well being of every child, as the *Charter* states, then we must meet all the basic needs for all children. Thousands of children suffer from asthma and other treatable

diseases. Others struggle to learn in overcrowded classrooms or under-funded schools. Kids from poor families are more likely to lack the opportunities and assets that contribute to a successful childhood. They're more likely to become teen parents, drop out of school and be unemployed as adults.

So what will it take to give all Illinois children the best start in life? Greg Duncan, Ph.D., a professor of education and social policy at the Institute for Policy Research at Northwestern University and one of the co-authors of "From Neurons to Neighborhoods: The Science of Early Childhood Development," suggests that government provide these measures:

- Policies that alleviate economic hardship.
- Child care standards that ensure safe environments for young children.
- Early intervention services for children with special needs.
- Family leave and child care policies that give parents a real choice about whether and when to go back to work.

"We can't count on the government for doing everything," Duncan cautions. "There is a role for families, there is a role for communities, there is a role for business, there is a role for government."

So for children to do well, their families must do well. And for families to do well, it takes support from individuals, communities, business and government. We must all work together to help children realize their potential and fulfill their dreams, which will allow our state to flourish.

FAMILY

Our vision: All children are part of loving and safe families. All segments of society share responsibility for supporting and families in raising their children and future generations.

The family plays a critical role in the life of a child. Parents are a child's first teachers, the people who introduce children to the world and protect and encourage them. Children need a nurturing family that provides a safe, loving, supportive environment that allows children to grow and develop.

The average size of an Illinois family is 3.23 people, and these families can look quite different—two parents, single parents, grandparents raising grandchildren, teens raising their own babies. We must respect the diversity of the more than 3 million families in Illinois and provide them with the skills, knowledge and resources to develop and sustain loving homes.

Among new mothers, more and more are making lifestyle changes to stay at home with an infant. Fifty-five percent of American mothers with an infant returned to work in 1998, down from a record-high 59 percent in 1998, according to the U.S. Census Bureau. This marks the first significant decline since the Census Bureau began tracking this statistic in 1976.¹

"The declines occurred primarily among mothers in the workforce who were 30 years old and over, white women, married women living with their husbands and women who had completed one or more years of college," says analyst Martin O'Connell, who co-authored the census report.

While many women with young children choose to work, many others, particularly those living on their own, must work to make ends meet. In

Illinois, the First Year at Home proposal would give a small financial boost to low-income families who choose to have one parent stay home for the first year with a new baby. Minnesota has adopted a similar proposal.

Families who have a child ages birth to 3 with developmental delays or disabilities may need additional support and services. These children and families may qualify for services such as speech and occupational therapy through the state's Early Intervention (EI) system. More than 11,500 children were evaluated and accessed EI services in 2000. Faced with escalating costs, the Illinois Department of Human Services doubled EI funding for fiscal year 2002 and initiated other changes to streamline services. These changes must make sure that all children in need of services receive them.

One family group that needs targeted support is the approximately 21,400 Illinois teens who become mothers every year. The teen birth rate in both the state and the nation saw a sharp decline in the late 1990s after an increase in the early part of the decade. But given the consequences and risk factors associated with teenage pregnancy, the current teen birth rate of 12.5 percent in Illinois for the years 1995-99 is still much too high. And the higher prevalence of teen births among minorities—especially black and Hispanic teens—must be addressed.

1 of every 4 Illinois children

... in foster care was placed in a permanent home in 2000
... is enrolled in either Medicaid or KidCare

Teens need to be informed about the risks of unprotected sexual activity and ways to prevent such behaviors, and families must encourage more frequent and frank discussions about teen sex. Communities must develop comprehensive plans for preventing teen pregnancy and giving young girls the vision, self esteem, education and skills to achieve a bright future.

Finally, Illinois has led the nation in its efforts to reduce the number of children living in foster care. The number of children removed from their homes because of abuse or neglect and living in temporary foster homes has fallen 42 percent from 1998 to 2001, to 28,024 children. About one-quarter of foster children were placed in permanent homes in 2000, providing them the opportunity for a secure and stable home environment.

Efforts to reduce the number of children in foster care, however, must be tempered with measures to assure that reports of child abuse are not dismissed easily, which can result in children not being taken into protective custody and remaining in unsafe homes. Families that become permanent guardians for foster children also need support and services to help them in their important role.

HEALTH

Our vision: Every child and family is guaranteed quality, comprehensive health care. All children live in a healthy environment that allows them to thrive.

Rockford pediatrician Dr. Lawrence Frenkel has a vision of what Illinois children need to succeed. "Obviously good health is close to the top," he says. "A reasonable education. Reasonable nutrition and a good standard of living. Freedom from drugs, alcohol, abuse. Love. And probably some community models and community support, people in the community children can look up to and say, 'Golly, I would like to be that person.'"

Children are more likely to succeed when they grow up healthy, and a lack of health insurance is a barrier to receiving regular preventive medical care,

including dental care. An estimated 12 percent of Illinois children—441,000 children, enough to fill Chicago's Soldier Field more than six times—are uninsured.

Children who are uninsured are 70 percent less likely than those who are covered to have received medical care for common conditions such as ear infections. They are also 30 percent less likely to receive medical attention when they are injured and are less likely to receive preventive care.²

More than 932,000 Illinois children are receiving coverage from Medicaid or KidCare, the joint state/federal programs that provide medical benefits for children in low-income families. Medicaid enrollment increased 3 percent from 1998 to 2001, and KidCare enrollment more than quadrupled during the same period. Yet thousands of children who are

eligible for these programs are not enrolled, underscoring the need for concentrated campaigns to get the word out about KidCare and Medicaid.

Children need their parents to be healthy, too. Yet thousands of working parents in Illinois are part of the estimated 42 million Americans without health insurance. These uninsured Americans generally:

- Are adults under age 65;
- Live in families with incomes higher than the federal poverty level;
- Are from working families with at least one full-time worker;
- Work in medium and large businesses with at least 25 employees; and
- Are most likely non-Hispanic whites.³

The biggest reason for lack of health insurance is the cost.⁴ For Decatur resident Nora Watters, the

HEALTH: KidCare and Medicaid Enrollment

Source: Illinois Department of Public Aid

\$400 monthly bill for coverage is prohibitive. "That's more than the house payment!" she says, echoing the concerns of many Illinois families. The Family Care proposal would benefit an estimated 200,000 families like the Watterses by providing assistance so parents can buy employer-based insurance or offering affordable health insurance to those whose employers do not offer coverage.

A healthy start to life also must address the risks associated with infant mortality and low birth weight. These tiny babies (weighing less than 5.5 pounds at birth) are at high risk of developmental delays and health problems, and are 20 times more likely to die before their first birthday.⁵

The percentage of low birth weight babies in Illinois has grown from 7.5 percent in 1985-89 to 8 percent in 1995-99, most likely due to increases in the number of multiple births and improvements in technology that helps premature babies grow and develop. But the racial disparity among low birth weight babies is important to note. Black women were most likely to give birth to these small babies—14.4 percent of all black births in 1995-99 were of low birth weight, followed by Asian-Pacific Islander (8 percent of births) and white and Hispanic (6.4 percent each).

This disparity may be linked to a lack of access to health insurance and prenatal care for minority mothers and their babies. Efforts such as the Illinois Prenatal Performance Project strive to improve healthy births for a very high-risk group of women by providing nutrition and case management services that lead to healthy births. This program would benefit communities across Illinois, but current funding limits it to eight locations.

SUPPORTING FAMILIES

Program Seals Children's Oral Health

The children of Coles County have had more to smile about since the 1995 creation of a community-based dental sealant program. The health education division of the county health department created this oral health initiative in response to growing community awareness about the benefits of preventive dental care and concern about the lack of dentists in this central-eastern Illinois county.

Coles County has one of 60 community-based dental sealant programs in Illinois. Children who are eligible to participate include those enrolled in Medicaid, KidCare or free and reduced-price lunch programs. Children receive dental exams; oral health information; and, when appropriate, dental sealants.

Dental sealants protect molar teeth from decay and cavities. Teams of dentists and hygienists visit schools to perform the procedure, which takes about 30 minutes per student. Ten of the 12 schools in Coles County participated in the 2000-01 academic year. Eighty-eight children in second and sixth grade received sealants, which should protect 99 percent of those students from cavities the first year.

Although federal public aid money and a state health department grant fund portions of the program, volunteers throughout the community are a vital part of the initiative. Coles County Health Educator Julie Dryden believes that the success of the program is found in the community-minded volunteers, including dentists and hygienists, who donate their time, services and materials.

Coles County Health Educator Julie Dryden shows student Nachole Morfitt the proper way to brush teeth.

The dental sealant program allows the opportunity to provide preventative dental services in a volunteer capacity serving the community. It grew up in and continues to live in," said dentist Jacob Pschirrer of Charleston. "Without this program, we may never have the opportunity to see some of these students in our office."

The Coles County oral health program also provides educational opportunities for children to learn about dental health benefits and risks. Students in first through fourth grades participate in "Body Walk," a health curriculum class that stresses oral health is a valuable component of physical health.

For more information about the Coles County oral health program, contact Julie Dryden at 217-348-0630.

SUPPORTING FAMILIES

Insurance Costs Leave Mom Uncovered

Kendall Waters was diagnosed with a brain tumor in 1997. While his father received health insurance through his job at a car dealer, Kendall was uninsured, as were his brother and mother. Luckily, the Decatur family discovered KidCare, the joint federal and state health insurance program for low-income children. Kendall was quickly enrolled in the program, and the expenses from his surgery, including more than \$37,000 in doctor bills, were entirely covered—costs that otherwise would have financially crippled the family.

Today, Kendall is 12, doing well and benefiting from KidCare. The program pays for his regular MRIs (which cost nearly \$10,000/year), regular doctor visits and the prescriptions needed to keep him healthy. His brother Johnathon, 15, is also covered by KidCare and receives preventive medical care.

But his mother, Nora Waters, is still without insurance, despite her job at the University of Chicago National Opinion Research Center. While her husband's insurance could cover her, the \$400 monthly cost is prohibitive. "That's more than the house payment!" she said.

Like many other working families, the Waterses earn too much to be eligible for Medicaid, but don't make enough to afford private insurance. They are among 200,000 working-poor parents in Illinois who would benefit from Family Care, a proposal to extend state-sponsored health insurance to parents of children eligible for KidCare. The Illinois General Assembly did not include Family Care in their \$53 billion budget for fiscal year 2002 despite strong bipartisan support.

Nora Waters poses with her family—(from left) Johnathon, David and Kendall.

The expenses from Nora's recent illness have reached \$3,000, causing the family to struggle financially. The mounting debt means Nora will continue to seek medical care only when she's deathly ill, and even then, someone has to force her to go, she said.

It is a blessing that Kendall is still with us, Nora said, explaining why she travels the country speaking to legislators and others about KidCare and Family Care. "I want to thank the people who helped him and the best way to thank them is to tell others about (KidCare)."

For more information about Family Care, please contact Emily Mondschein at the Budget and Tax Policy Initiative at Voices for Illinois Children at 312-516-5568 or emondschein@voices4kids.org.

1 of every 9 Illinois children
... does not have health insurance

As children grow, they can face a variety of health problems. Getting the recommended series of vaccines on schedule has reduced child mortality and improved the overall health of children. In fact, only 123 Illinois children contracted vaccine-preventable diseases in 2000.

While vaccinations have been successful, asthma remains the most common chronic illness of childhood, afflicting more than 8.6 million American children, according to the American Lung Association. Between 1982 and 1996, asthma prevalence increased by 55 percent among children.

Possible reasons for the increase include increased air pollution and limited access to medical care, especially for children living in inner-city areas. American children also spend more time indoors than previous generations, exposing them to asthma-triggering dust mites and other allergens.

In Illinois, fewer children are being hospitalized for asthma—hospitalizations dropped nearly 20 percent from 1997 to 2000, to 9,077. But the toll of childhood asthma is measured not only in the cost of treatment (estimated at \$3.2 billion a year nationally) but in missed school days—more than 10 million school days each year nationally. Controlling the release of air pollutants is one way to combat childhood asthma. Also, educational efforts should focus on ways to reduce exposure to indoor allergens such as secondhand smoke.

EDUCATION

Our vision: All children receive, as a right, free quality education that fosters their intellectual, social, emotional, physical, spiritual, cultural and creative development.

A good education—one that starts early, provides enriching learning opportunities and challenges young minds—is a key factor in helping children succeed. Children need to be active participants in the learning process and need to graduate from high school. Parents should be involved in their child's learning beginning at birth, and communities and policy-makers must explore ways to develop an educational system that addresses all children's needs.

Research has repeatedly shown that children's earliest years are a critical time for brain development. Early care and education programs such as preschool, child care, Head Start and the state's preKindergarten program can provide early learning opportunities to 3- to 5-year-olds. High-quality programs don't just focus on teaching kids their ABCs and 123s; they address the entire range of a child's development, including intellectual, social and emotional development, such as the ability to sit in a classroom and form friendships.

Improving the quality of and access to early learning experiences is crucial to ensuring children's future academic success. About half of the state's 3- to 5-year-olds are in some type of preschool program, and most young children in child care are in informal, unlicensed settings. About 7,000 children are waiting to get in to the preK program and 10,000 more in Chicago are waiting to be screened to see if they are even eligible.

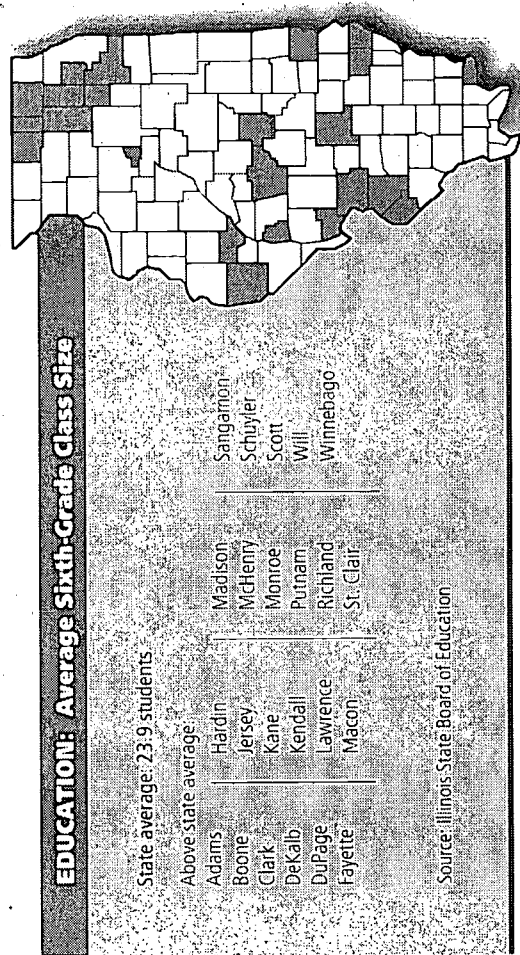

The Governor's Task Force on Universal Access to Preschool is examining the range of preschool options available and will recommend ways to ensure that all children whose parents choose it can access high-quality programs. Enacting the task force's recommendations—and providing the necessary funding—will help ensure children receive a solid learning foundation.

Many low-income working parents need help affording child care. State subsidies provide care for more than 220,000 children, yet many low-income working parents do not qualify because eligibility is based on outdated income levels. These eligibility rules also punish working parents striving for self sufficiency—a single mother of two children in 2001 lost her subsidy if she earned more than \$24,243. Updating eligibility guidelines and supporting families until they can afford the

full cost of care will help working parents remain productive employees.

Lawmakers also must address the lopsided school funding system during the spring 2002 session. Under the current method, districts with a scant property tax base spend as little as \$4,560 per student, while richer districts can spend upwards of \$14,000 per student. Lawmakers should carefully

SUPPORTING FAMILIES

Center Readies Children for School

At this entry point to the Harlem School District in Winnebago County, 3- to 5-year-olds in the state-funded prekindergarten program are called "rising stars." This simple phrase represents the Donald C. Parker Early Education Center's belief that with a safe, nurturing environment, all children can reach their full potential as lifelong learners.

The Parker Center's belief in the potential of these children goes far beyond rhetoric. If you were to create an early childhood learning center from scratch, taking into account the flurry of recent research on brain development from ages birth to 5, chances are good it would resemble the Parker Center in Machesney Park.

The "rising stars" in the Parker Center's preK program spend the day interacting with the 77-member staff, which includes 42 certified teachers and an abundance of parent and senior citizen volunteers. With a low staff turnover rate, children see familiar faces each day, helping them to feel secure and confident, said Principal Betty DuPre. On any given day, children may work with an early literacy specialist or spend time in the Studio Room investigating and inventing through art in a multi-age setting. DuPre credits the center's success to a "wonderful environment" filled with "dedicated teachers."

The Parker Center has about 750 children enrolled for the 2001-02 school year—160 in preK, 530 in kindergarten and 60 in the early childhood program for special needs children ages 3 to 5. To

Children enjoy playing outdoors at the Parker Center.

help working parents, children can attend the YMCA School Age Center housed in the building, which offers extended-day child care (from 6:30 a.m. to 5:30 p.m.) and year-round programming. The Parker Center also features a Parent Resource Center and hosts a monthly family activity night.

The only things missing at Parker are the space and staff to expand. There are 95 children waiting for eligibility screenings and another 50 on the waiting list that the center is unable to place in programs, said DuPre.

For more information about the Parker Center, please contact Betty DuPre at 815-654-4559.

consider the forthcoming recommendations from the Education Financing Advisory Board, which has been examining school funding for more than a year.

How much a district spends on education can affect a host of classroom issues, such as average class size and graduation rate. The graduation rate in Illinois has changed little, increasing from 80.5 percent in 1995-96 to 82.6 percent in 1999-00. The attendance rate similarly has stayed steady around 93 percent.

One important factor to consider is the average class size. Smaller classes mean more individual attention for students, so those who struggle academically can get help. In Illinois, average class sizes are largest in middle school and smaller in elementary school and high school. The average first-grade class had 21.6 students in the 1999-2000 academic year, sixth grade had 23.9 students and high school had 18.4 students. Addressing inequities in school funding can help balance class sizes in order to ensure all students have equal opportunities for a quality education.

2 of every 3 Illinois children

... live in a family with two married parents

ECONOMIC SECURITY

Our vision: All children have economic security and economic justice: Meaning access to food, clothing, transportation and safe, affordable housing, and that all families have equal opportunities to provide these basic economic needs.

Since welfare reform began in 1997, the drive to decrease the number of people receiving government assistance has focused on getting adults to work. But having a job does not automatically guarantee an escape from poverty, assure greater family stability, or ensure entry into the middle class. To do what is best for children, we must concentrate our efforts on moving their families out of poverty, not just moving their parents into the workforce.

Thousands of Illinois adults have moved into the workforce in order to meet federal welfare requirements. The number of adults receiving Temporary

Assistance to Needy Families (TANF) fell 78 percent from 1997 to 2001, and child cases have fallen more than 64 percent. Yet more than 60 percent of TANF recipients who are working make less than \$6 an hour—not enough to pay for a family's basic needs.

The income a family must earn in order to be self sufficient—able to pay for basic needs (including taxes) without public subsidies or informal help such as free babysitting—varies by region as well as by family type. In Sangamon County, a single-parent family of three must earn \$13.49 an hour to make ends meet, more than twice the federal minimum wage of \$5.15 an hour. That same family must earn \$14.69 an hour in Peoria County, \$15.15 an hour in Winnebago County and \$19.03 an hour in Chicago.⁹ Jobs that pay those salaries require education and skills that many adults need help in achieving, and a growing number of Illinoisans are losing their jobs in the changing economy.

ECONOMIC SECURITY: TANF Cases by Race, 2001

Nearly one of every five Illinois children, or 624,000 kids, are growing up in working-poor families that constantly struggle to make ends meet.⁹ These families are earning more than the federal poverty threshold—\$17,650 for a family of four in 2001—but less than is necessary to be self sufficient. A sudden crisis—a job loss, an illness or injury, an unexpected car repair—can sometimes trigger the loss of a home, a return to welfare dependence and an increase in family stress.

Many families also struggle with housing costs. Illinois ranked 43rd in the nation for affordable housing in 2001, according to the "Out of Reach" report by the National Low Income Housing Coalition. An Illinois worker earning minimum wage would have to work 116 hours a week in order to afford a two-bedroom unit at the statewide fair-market rent of \$776 per month.

As for the poorest of the poor, growing up in poverty is associated with an increased risk of costly medical problems, developmental delays and problems in school. As children living in poverty

get older, they are more likely to drop out of school, have babies in their teens and be unemployed.¹⁰ The child poverty rate in Illinois was 17.5 percent in 2000. Nationally, the child poverty rate fell to 16.2 in 2000, its lowest level since 1979.¹¹

... lived in poverty in 1997

Helping families leave poverty requires providing them with opportunities and support to receive the education and training that will allow them to climb up the economic ladder. Families need help with transportation, affordable housing and finding someone to watch their children when parents are at work or school. Expanding the Illinois Earned Income Tax Credit to make it larger, refundable and permanent can provide poor families with a financial boost that can help them pay off debt or put a down payment on a house.

Welfare reform is up for federal reauthorization in 2002, and funding should continue at the current level at the very least. Illinois also should continue putting money saved from the reduction in TANF caseloads into supportive programs such as child care subsidies and job training. Given the downturn in the nation's economy and rising unemployment rates, it makes no sense to cut programs that serve the people who need help the most.

SUPPORTING FAMILIES

EITC Boost Fails to Realize Dream

Cook County resident Karen Washington, 36, was one of the 742,000 Illinois residents who found she had extra financial support in 2000 to meet the needs of her family.

For Karen, who worked in a bank in 2000 but is currently unemployed, the combination of the state and federal Earned Income Tax Credits (EITC) meant a 20 percent increase in her \$15,000 annual income. To her children, Cornelius, 15, and Leroy, 5, the tax credits meant new school clothes.

Since 1975, the federal EITC has helped low- and moderate-income workers raise their level of income. In 2000, the federal credit lifted more than 120,000 children out of poverty, providing benefits of up to \$3,888 per family. When the Illinois EITC was created in 2000, working families found additional financial support of up to \$194 in reduced tax liability through a non-refundable credit.

While Karen acknowledges how much she benefited from nearly \$3,600 in state and federal credits, she said the extra money did little to change her overall financial status or standard of living. She had hoped to make a down payment on a home in Gary, Ind., but the combined EITCs were worth enough only to buy food and clothes for her children or to make the down payment on the new home—not both.

Karen hopes that with a new job—where she will work as many overtime hours as she can—she will be able to save enough to buy the house in a few years. In the meantime, efforts to expand the state EITC, as well as making it refundable and permanent, could help people such as Karen to achieve their financial goals.

For more information on the EITC, please contact Andrea Ingram at the Budget and Tax Policy Initiative at Voices for Illinois Children at 312-516-5556 or aingram@voices4kids.org

SAFETY

Our vision: Every child lives in a physically and emotionally safe environment that cultivates acceptance and peace.

Providing a safe environment—at home, at school, in neighborhoods and communities—allows children to lead happy, healthy lives and achieve their dreams. Violence, injury and environmental hazards are among the factors that negatively impact the safety of children.

Children who are abused or neglected may suffer a range of long- and short-term effects. They may experience physical injuries as well as psychological damage. They are less likely to form healthy attachments with others and, as a result, are likely to experience difficulties in their social and emotional development.

Both the number and rate of child abuse and neglect in Illinois are continuing to drop. The number of cases fell 11 percent, from 30,350 children in 1998 to 27,049 children in 2000. Similarly, the rate of abuse and neglect fell from 9.4 of every 1,000 kids in 1998 to 8.3 per 1,000 in 2000. There has been a corresponding and much larger decline in children in foster care as well, as noted earlier.

Programs such as Healthy Families Illinois help by preventing abuse before it occurs. Trained family support workers meet with at-risk new parents to help foster healthy parent-child interactions, share information about child development and provide access to local services and support networks. Healthy Families Illinois serves about 3,000 families a year in more than 40

1 of every 8 Illinois children
... born in the years 1995-99 was
born to a teen mother

Child Fatality Review Board teams are examining all reports of child deaths and creating a statewide database. The process strives to provide fact-based recommendations to the state on ways to prevent child deaths in the future.

"We try to understand what happened in the death of a child," says Dr. Neil Hochstadt, a pediatric psychologist and chairman of the Child Fatality Review Board Executive Committee.

"We're looking for systemic reasons for the death of a child. . . . We want to understand what happened, what went wrong and what we can do about it."

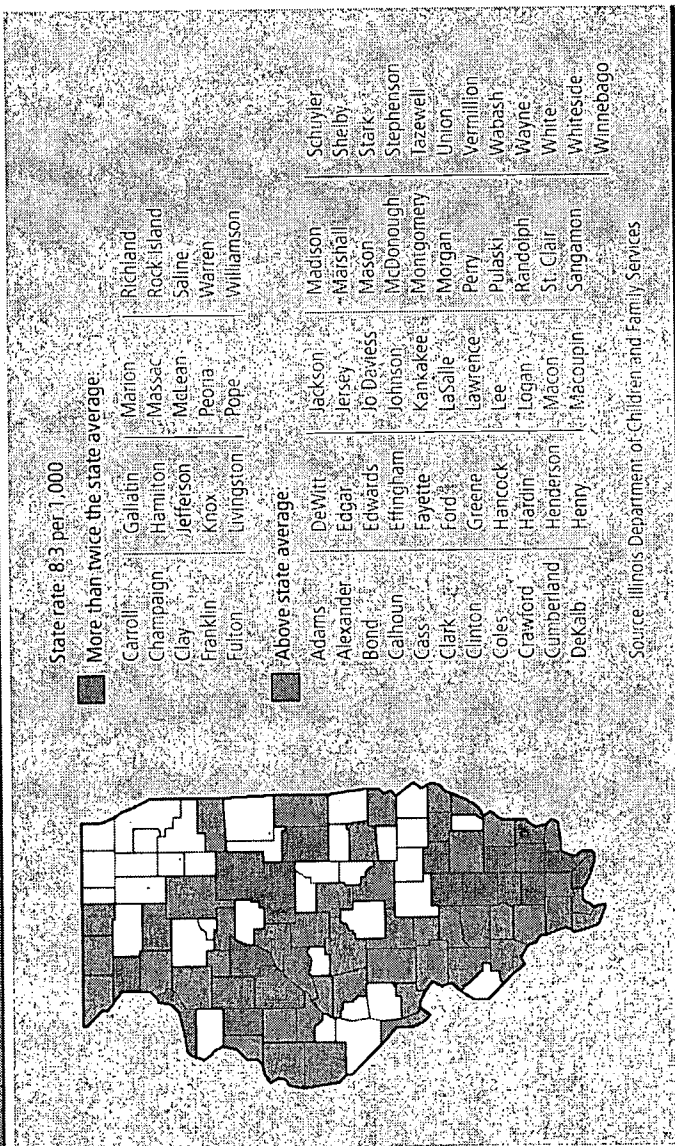

Gun-related child deaths also tend to be undercounted, Hochstadt says. More than 1,600 Illinois children died of gun-related injuries in the years 1995-99, and thousands more were injured. Some of those injuries require a lifetime of costly medical care.

Unlike cars, sleepwear and toys, firearms are not regulated by the federal government for health and safety standards. No federal agency has the power to require safety features on guns such as

counties, but the demand continues to outpace the program's capacity. Increasing state funding would allow even more Illinois families to be connected to their community, thus promoting healthy child development and reducing feelings of isolation and other factors associated with child abuse and neglect.

Especially troubling are the children who die as a result of child abuse. A lack of uniform standards for reporting child deaths in Illinois means many of these deaths—and others—are undercounted. A new effort is collecting detailed information on the causes of all child deaths in Illinois. Nine

SAFETY: Child Abuse and Neglect, 2000

trigger locks or indicators that note whether a bullet is in the chamber. These consumer product safety standards could be implemented on a federal level, with passage of the Firearms Safety and Consumer Protection Act, or on a state level.

Illinois is one of a handful of states that gives the state attorney general the authority to enact consumer protection regulations. Massachusetts was

the first state to implement far-reaching consumer product safety regulations for handguns—a step that could help prevent unintentional deaths and injuries of Illinois children.

Creating a safe environment also extends to the places where children spend time: home, school, parks and neighborhood streets. Vacant buildings, burned-out streetlights and harmful trash such as

1 of every 10 Illinois children
... screened for lead poisoning in 2000 had dangerous levels of lead in their blood

broken bottles can be dangerous to children. Lead-based paint often found in old homes poses another threat if children ingest the chipping paint.

Nearly one in 10 Illinois children in 2000 had levels of lead in their blood that were considered dangerous—one of the highest rates of childhood lead poisoning in the country, according to the Illinois Department of Public Health Childhood Lead Poisoning Prevention Program. At high levels, lead poisoning can damage the nervous system, kidneys and reproductive system. Even at low and moderate levels, lead poisoning can cause learning disabilities, speech problems, shortened attention span and behavioral problems.

Illinois children are required by law to be assessed for lead poisoning at least once before they begin school, although screening is highly recommended between ages 1 and 2 since early detection is the key to preventing damage. The Illinois Legislature also should approve the Comprehensive Lead Education, Reduction and Window Replacement Program, which would reduce lead paint hazards by providing residential property owners loans and grants to replace windows in pilot communities.

ARTS, RECREATION AND CULTURE

Our vision: All children can express and celebrate their souls and spirits through arts, culture and recreation. Children have open time to dream, play and create.

Children in Illinois are fortunate to have many opportunities to learn about different cultures, to become involved in recreational activities and to be exposed to the arts. No other generation has had the variety or richness of experiences available in a broad range of offerings including arts and cultural programs, seasonal and year-round recreational activities, before- and after-school programs, organized sports and athletics, summer day camps, sports camps, arts and crafts, performing arts, family-oriented programs and more.

These various programs and activities, available for infants through adolescents, are provided by a wide array of organizations, including park districts, municipal recreation departments, school districts, library districts, churches and religious organizations, YMCA/YWCA, Boys and Girls Clubs, Boy Scouts and Girl Scouts, fraternal organizations, universities and community colleges, Illinois Arts Council, Illinois State Museum, and a host of museums, zoos and many others.

While our children have many activities available to them through countless providers, there is still no centralized method of collecting data on the extent of children's access and exposure to arts, recreation and culture in Illinois. Efforts to collect this useful data should be encouraged.

Knowing the number and range of programs available would help projects such as the Illinois

After-School Initiative Task Force as it assesses after-school services, develops a plan to better coordinate services and identifies funding to increase the number of children served. The task force's recommendations will be sent to the Illinois Legislature in spring 2002.

Such data would also benefit the Kids Share Endowment, which, if created, would fund local programs that address a community need that improves the health and well being of children and their families. A proposal suggests creating the endowment by allocating \$500 million of tobacco settlement proceeds in fiscal years 2003 to 2009.

SUPPORTING FAMILIES

Teen Program Encourages Positive Risks

Risky behavior—crime, teen sex, smoking, drinking, drug use, karaoke, karaoke?! At the Adams County Health Department's Teen REACH after-school program, adolescents ages 10 to 16 are encouraged to try taking risks, but positive risks that will enhance their self-esteem, improve their chances at academic success and prepare them for the challenges ahead.

So, from 3 to 5:30 p.m., the approximate hours when teens are most likely to be engaging in negative behaviors such as criminal activity and sex-adolescents at the Teen REACH program can be found singing karaoke, bowling or getting help with homework.

Teen REACH served 569 adolescents at five sites in Adams County in 2001 and more than 19,000 young people statewide. The primarily state-funded program, which began in 1998, focuses on five areas: academics, recreation and culture, mentoring, life skills and parental involvement. Parental involvement is highly encouraged at Teen REACH's Adams County sites. Parents coach teams, chaperone trips to the theater, attend parenting workshops and more.

Cindy Roope, Teen REACH coordinator at the Adams County Health Department, credits the program with providing a variety of positive experiences. For some kids, it's an opportunity to

Teen REACH participants joined other youth to kick off the *Charter for Illinois Children*.

get focused academic help or a safe place to spend a few hours. For youth who are struggling with behavior problems, Teen REACH provides structure while introducing them to new people and activities. Teen REACH's afternoon snack provides an important meal for others. Roope said One teen said that the program helped to keep him off the street and off drugs after school, while another credited Teen REACH with teaching [him] how to act around people.

And with all centers open until at least 5:30 p.m. and one center in Quincy open until 9 p.m., the Teen REACH program provides supervision during critical hours for teens.

For more information about Adams County Teen REACH, call Cindy Roope at 217-222-8440 extension 147.

When we look at the range of statistics that reflect the quality of life for Illinois children, our path is clear. In order to help children prosper, all of us—individuals, families, communities, business and government—must work together to solve the problems that affect childhood and to emphasize prevention as a key to raising healthy, happy children.

We must support families in their important role by giving them skills and resources to create a stable, nurturing home. We must ensure that children are healthy by providing access to medical care starting before birth and lasting into adulthood. We need to prepare children for the future with a high-quality, well-funded education that starts before kindergarten and ensures graduation from high school.

We must aid families struggling to pay for their basic needs by providing affordable housing, job training, child care and fair tax policies. We need to keep children safe from harm by eliminating environmental hazards, keeping guns away from kids and addressing stresses that cause abuse and neglect. And we must provide plenty of opportunities for children to experience the arts, recreation and culture.

When we accomplish this, we will achieve the vision of the *Charter for Illinois Children*: "When children realize their potential and fulfill their dreams, our communities flourish and we are enriched beyond measure."

SOURCES AND DEFINITIONS

An asterisk (*) denotes indicators new to Illinois Kids Count this year. Unless otherwise noted, "children" refers to children ages birth through 17.

COUNTY ATTRIBUTES

*Leading Industries

Counties are affected by the business opportunities available within them. Without a variety of employment opportunities, parents cannot obtain sufficient incomes to provide for their families and the well being of their children declines.

This indicator shows the sectors within which the most employees work in each county. Sector definitions are according to North American Industry Classification System standards from 1997. Leading industries were ranked based on the number of employees employed in a sector for the week including March 12, 1999. Only the top sector for each county is shown; some sectors are broadly defined and have names encompassing multiple industries. The actual employee numbers can be found on the U.S. Census Bureau Web site at www.census.gov.

Data Source: U.S. Census Bureau--North American Industry Classification System County Business Patterns

*Unemployment Rate

The unemployment rate is the number of people unemployed as a percent of the total labor force. The labor force refers to all civilian, non-institutionalized, working-age individuals (age 16 and older) who were working or without employment but available and actively looking for work during the week of Oct. 12, 2001. We use non-seasonally adjusted rates.

The employed include those workers who either worked at least one hour for pay or profit, were temporarily away from work due to reasons such as labor disputes, vacation or illnesses, or worked at least 15 unpaid hours in a family business. Part-time, full-time, self-employed and workers receiving government assistance are all considered employed.

The unemployed include those who lost their jobs involuntarily, quit their jobs, entered the labor market for the first time or re-entered the labor market after a period of absence, and those who have been laid off but are expected to be recalled.

Some people are considered not a part of the labor force, such as students, homemakers and retirees, and those who are discouraged over their job opportunities or who face barriers, such as inadequate transportation or child care, but want a job.

Data Source: Illinois Department of Employment Security--Local Area Unemployment Statistics

Child Population

The child population in Illinois has both grown and become more diverse over the last 10 years. Within individual counties, drastic shifts in racial composition can be seen between 1990 and 2000. White children now make up a smaller proportion of the population than in 1990, while the proportion of black and Hispanic children has increased.

The child population for both years was calculated by subtracting the "18 years and over" population from the total population, giving a result of all children age 17 and under. People of Hispanic origin can be of any race.

The U.S. Census Bureau changed its definition of many racial and ethnic groups between the 1990 and 2000 census, so we are unable to calculate change in population size over time for several racial and ethnic groups. The 2000 census for the first time also allowed people to indicate they are of two or more races and select specific races. We have chosen to combine these people in one category called "two or more races."

Data Source: U.S. Census Bureau

Total Births

This indicator shows the number of live births in 1999.

Data Source: Illinois Department of Public Health

FAMILY

*Living Arrangements for Children

This statistic shows the relationship by household type for the child population. A family household is one in which any relatives of the household are present. There are three basic types of family households: married couple, female headed (no husband present) and male headed (no wife present). The numbers for married-couple family, single mother and single father categories reflect their own children.

The category "other" combines those living with non-relatives, those who are the household or spouse of the household, and children who live in group quarters. The U.S. Census Bureau defines the household as one of the people who owns or rents the home. If there is no such person present, any household member 15 years or older can serve as the household for the purpose of the census.

The Census Bureau recognizes two general categories of people living in group quarters: the institutionalized population (correctional institutions, nursing homes, hospitals, juvenile institutions and other institutions where residents are under supervised care or custody) and the non-institutionalized population (college dorms, group homes, military quarters and other non-institutionalized group quarters).

Data Source: U.S. Census Bureau

Teen Births

The teen birth rate is a key indicator because of the risks that teenage childbearing pose to both young mothers and their children. Teen mothers are more likely than other teens to come from

economically disadvantaged families, to be poor academic achievers and to suffer from substance abuse and behavioral problems. Having a child diminishes teen mothers' economic prospects and limits further educational opportunities.

Children born to teen mothers face tougher prospects than those born to older mothers. They are less likely to have received adequate prenatal care, more likely to be of low birth weight or to die before their first birthdays (especially if they are a minority), are at higher risk for abuse and neglect, are less likely to finish high school and are more likely to be poor.¹²

The percent of births to all teens measures the proportion of total births to all mothers that are to girls under 20. This figure is calculated by dividing

the number of births to girls under 20 by the total number of births to all women of all ages. For state racial data, data for Hispanic people was unavailable for the year 1985 and was thus not included.

The percent of teens who gave birth is calculated by dividing the number of females 15 to 19 years old who gave birth in 1999 by the total number of female teens those ages in 2000. The racial data is based on the 1999 Current Population Survey. (See chart at left)

Data Source: Illinois Department of Public Health

Children in Foster/Substitute Care

Each year tens of thousands of children are removed from their homes and taken into state custody, most often due to child abuse and neglect or parental problems such as substance abuse that make parents temporarily unable to care for their children. The Illinois Department of Children and Family Services (DCFS) is in charge of finding temporary placements for these children in foster care homes, group homes or other settings until parents are able to resume care or other, more permanent care-giving options can be arranged.

The number of children in foster care in Illinois declined 41 percent, from 46,076 in 1998 to 26,967 in 2001. The rate of children in foster care saw similar declines, from 14.2 per 1,000 in 1998 to 8.3 per 1,000 in 2001. The number of children under 6 in foster care, a key indicator due to the increase in infants entering care, declined even more dramatically, with a 47 percent decrease from 1998 to 2001. The exit rate for young children was higher than that for older children, meaning that younger children are returned home, adopted or placed in other arrangements more quickly than older children.

Teen Births in Illinois, 1995-1999

	Number of all births	Number of births to teens	Percent of births to teens
All Races	914,059	114,488	12.5%
White	700,700	67,590	9.6%
Black	178,839	45,875	25.7%
Asian	32,547	727	2.2%
Other	1,973	296	15.0%
Hispanic*	169,608	27,314	16.1%

*Hispanic may be of any race

Percent of Births to Teens, 1999

	Number of births to 15- to 19-year-olds	Percent of teens giving birth
All Races	21,411	5.1%
White	13,061	4.1%
Non-white	8,350	8.5%

Source: Illinois Department of Public Health

Substitute care includes children under 18 who were in DCFS care on March 31 of the given year. Rates were calculated by dividing the number of children in foster care for a given year by the total under-18 population in 2000 according to the U.S. Census and multiplying the result by 1,000.

Data Source: Illinois Department of Children and Family Services

*Permanency Placement

The ultimate goal of substitute care is to return children home to their parents once the situation is deemed safe or to find children other permanent, safe, loving living arrangements. Nearly one in four Illinois children in substitute care in 2000—23.8 percent—found permanent homes.

The permanency placement rate is a composite of three different types of permanency placements measured by DCFS:

- Reunification involves children returned home to their parents. About 8 percent of children in care at any point during 2000 were reunified that year.
- Adoption was the permanent placement for nearly 13 percent of children in substitute care in 2000, a big increase over 1997 when the adoption rate was just more than 5 percent.
- Subsidized guardianship means caregivers are given state financial assistance to care for children, but parental rights are not formally terminated. This option is most commonly used for families where another relative takes children into care, also known as kinship care. In 2000, 3.5 percent of foster children were placed into subsidized guardianship.

Rates of permanency placement increased from 1997 to 1999 and declined in 2000. This is because the harder-to-place children (older, special needs) are still in foster care, while easier-to-place children were placed in previous years.

The permanency placement rate was calculated by adding the number of all placements for that year, dividing by the total number of children in care at any point during the year and multiplying by 1,000.

Data Source: Illinois Department of Children and Family Services

* Early Intervention Enrollment

The Early Intervention (EI) program serves children birth to 3 who have a developmental disability or delay of 30 percent or greater and those who are at high risk for such delays. The EI system helps support families and children through comprehensive assessment and specialized services such as speech and occupational therapy. Once a child turns 3, public schools provide special assistance to help the child with social and emotional development and continued healthy growth.

These data show the number of children with active Individual Family Service Plans. This represents the number of children who have been evaluated and are likely to have begun treatment. County-level enrollment data are for July 2001. Children are counted in their county of residence, even if they receive services in a different county. State-level data are for Dec. 1, 2000. Of the 11,506 children enrolled, 1,450 were birth to 1 year old, 3,922 were 1 to 2 years old and 6,134 were 2 to 3 years old.

Data Source: Department of Human Services, Bureau of Early Intervention

HEALTH

Uninsured Children

The most accurate data on uninsured children are only available on a statewide level. This statistic shows all children through age 18 who lack either state-subsidized or private health insurance. These statistics were estimated by the Kaiser Family Foundation based on pooled March 1998, 1999 and 2000 Current Population Surveys, representing the years 1997 to 1999. These statistics can be found at: www.statehealthfacts.kff.org/

Data Source: Kaiser Family Foundation State Health Facts Online

KidCare and Medicaid Enrollment

Low-income children can receive health care coverage through two joint state/federal programs—KidCare and Medicaid. Illinois established KidCare in 1997 as part of the State Child Health Insurance Program to provide either low- or no-cost health care coverage. Low-cost care (KidCare Premium) is available to children in four-person families with an annual income less than \$32,652. No-cost care (KidCare Assist) is available to children in four-person families with an annual income less than \$23,472. Pregnant women are also eligible for the program.

Medicaid, the older program, is available to children 19 and under in low-income families. Infants qualify if they are in families with incomes less than twice the federal poverty level, while children ages 1 to 19 qualify if their family income is less than 133 percent of the federal poverty level. Children in families whose incomes total 133 percent to 185 percent of the federal poverty level are typically eligible for KidCare.

Enrollment in both programs is on the increase. KidCare enrollment grew 430 percent from 1998 to 2001, and Medicaid enrollment increased 3 percent during that period. Enrollment data are from November 1998, November 1999, October 2000 and October 2001.

Data Source: Illinois Department of Public Aid

Infant Mortality

The infant mortality rate reflects the number of children who die before their first birthday. The Illinois Department of Public Health reports that state and national infant mortality rates have declined dramatically in the last 40 years, primarily as a result of a drop in infant deaths from pneumonia and influenza, respiratory distress syndrome, premature births/low birth weight, birth defects and accidents.

The infant mortality rate is calculated by dividing the number of infant deaths for a five-year period by the number of live births during those years and multiplying by 1,000. Rates are only calculated when there are 10 or more cases in the five-year period. If there are fewer than 10 cases for the period, a ** symbol appears. (See chart at right)

Data Source: Illinois Department of Public Health

Low Birth Weight

Low birth weight babies—those weighing less than 5.5 pounds at birth—are at high risk of developmental delays and health problems throughout life. Percentages were calculated by dividing the number of low birth weight babies

over a five-year period by the total number of live births in those five years and multiplying the result by 100.

State-level raw numbers by race are listed below. Figures for 1985-89 are from Illinois Department of Public Health vital statistics publications, and figures for 1990-99 were queried from IDPH's Illinois Project for Local Assessment of Needs Web page at <http://app.idph.state.il.us/index.htm> (See chart below)

Data Source: Illinois Department of Public Health

Infant Mortality, 1995-1999

	Number of births	Number of Infant Deaths	Infant Mortality Rate/1,000
All Races	914,059	7,745	8.5
White	700,700	4,519	6.4
Black	178,839	3,085	17.3

*Hispanic may be of any race

Source: Illinois Department of Public Health

*Asthma Hospitalizations

Sixty-three percent of childhood asthma hospitalizations in Illinois in 2000 were in Cook County. DuPage County had the second-highest number of asthma hospitalizations in the state, with just under 4 percent of the total cases.

Data were queried from the Illinois Health Care Cost Containment Council's Web site at www.state.il.us/agency/hccec/default.html. Due to confidentiality constraints, counties with between one and six asthma hospitalizations for the year are denoted with the symbol (--).

Chicago data were queried by individual zip code, meaning that substantial cell suppression is likely to have occurred. Thus, the figure of 3,862 presented is probably lower than the actual total number of Chicago asthma hospitalizations.

Figures are for children ages birth to 19. Emergency room visits are not included. Cases are based on inpatient status for any length of time, with asthma as the primary diagnosis. State figures were reported by "cause of hospitalization" to minimize cell suppression.

Data Source: Illinois Health Care Cost Containment Council

***Vaccine-Preventable Diseases**

In 2000, 72.8 percent of 19- to 35-month-old children nationally and 71.2 percent of Illinois toddlers had the recommended series of vaccinations for their age, fully immunizing them against diphtheria, tetanus, pertussis (whooping cough), measles, mumps, rubella, polio and hepatitis B.¹³ Although short of the national goal of 90 percent immunization rates, these figures represent a 40 percent increase when compared with immunization rates in 1992, when the first reliable national statistics were released.¹⁴ Immunization rates are typically lower among black, Hispanic, and American Indian/Alaska Native children and also vary by state.¹⁵

The data show the number of children 18 or under who were diagnosed with hepatitis B, measles, mumps, pertussis, rubella or tetanus in 2000, all diseases that can be prevented by vaccines. Suspect and probable cases are also included. Cases are classified by the child's place of residence.

Data Source: Illinois Department of Public Health

EDUCATION

Head Start and PreK Enrollment

Teachers, parents and researchers agree that children's early learning sets the foundation for future academic success. The federal Head Start program was created in 1965 to serve economically disadvantaged children between ages 3 and 5 who could benefit from early academic, social and emotional support. Since then, the program has expanded—Early Head Start (ages birth to 2) served 2,785 children in Illinois in FY 2001, and Migrant Head Start served 505 Illinois children in FY 2001.

Head Start county data are the number of funded slots available in each county, not the actual enrollment. State data show both funded slots and actual enrollment for Head Start, Early Head Start and Migrant Head Start programs combined. The disparity between enrollment and funded slots is a result of overfilled or under-filled Head Start centers whose enrollments do not match their funding and because of different reporting methods.

The Head Start racial data on the state page are by enrolled families, not by child, explaining why the individual races do not add up to the total. For this indicator, American Indian children are included in the "other" category.

Like Head Start, eligibility for the state Pre-Kindergarten Program for Children at Risk of Academic Failure (which serves 3- to 5-year-olds) is based on income and other factors for potential risk of academic failure, such as having parents who are teens or incarcerated, or having a chronic illness.

While local funding often supplements state dollars, few counties have the resources or facilities to provide services to all children in need, resulting in waiting lists in almost every county. More than 8,000 Illinois children were on the preK waiting list for the 2000-01 school year. In Pope County, the waiting list has more children on it than there are children being served. The need for program expansion is clear. It is important to note that children are placed on the waiting list only when their parents make that decision. Some parents enroll their children in Head Start or another preschool program instead of waiting. Wait lists are typically a result of a lack of funding, limited space to house programs and not enough qualified staff to run programs.

In nine counties—Clark, Cumberland, Douglas, Ford, Franklin, Moultrie, Perry, Stephenson and Williamson—preK programs are available through joint agreements that cross county lines. Data are unavailable for these counties. In other counties, agreements allow children to be served closest to their homes, even if the location is not within their district or county. All data are preliminary. Data are reported by where children are served, not the counties where children live. State-level racial percentages do not include children in Chicago Public Schools.

Data Source: U.S. Department of Health and Human Services Administration for Children and Families, Head Start Branch; Illinois State Board of Education

Licensed Child Care Providers

As of June 2000, the Illinois Network of Child Care Resource and Referral Agencies' database contained 13,735 licensed and license-exempt child care centers and homes able to care for 362,266 children.

State subsidies helped make care more affordable for 172,896 children (who were from 86,281 families) in June 2000. That's a 12.6 percent increase in families using subsidized care and a 13.7 percent increase in subsidized children since June 1999.¹⁶

Infants accounted for about one in four children in child care in 2000, while the largest increase in children served was school-aged children, which increased 2 percent to total 20 percent of all children in care.¹⁷

We present only the number of licensed child care centers and homes, not the 20 percent of facilities that are license exempt. Voluntary accreditation is provided through the National Association of Family Child Care, National Association for the Education of Young Children or National Child Care Association.

Data Source: Illinois Network of Child Care Resource and Referral Agencies

*Average Class Size

Students can receive more personal attention in smaller classes, leading to better educational outcomes. In most Illinois schools, elementary and high school classes are significantly smaller than junior high school classes. Average class size is calculated by dividing the enrollment of a given

grade by the number of classes for that grade. For high school, enrollment in all subject areas is divided by the number of classes. For high schools and optionally for sixth grade, an average for the second and fifth class periods is used. Data are reported for the first school day in May 2000.

Data Source: Illinois State Board of Education

Per-Pupil Spending (Operating Expenditure)

Schools have vastly different resources available to them for teaching and other services as a result of their community, school size and other factors. This affects what services and opportunities are available to students, the quality of teaching and student success.

The per-pupil operating expenditure includes instructional expenditures, costs of pupil support services, instructional staff support services, school administration, business support services, central support services, community services, debt services, payments to other governmental units for services provided and central administration services. It does not include summer school, adult education, bond principal returned or capital expenditures. The figure was divided by the nine-month average daily attendance to calculate per-pupil figures for the 1999-00 school year.

It is important to note that school districts in poorer counties may have received federal and state grants to help improve educational outcomes in areas of low achievement and high poverty, raising those counties' spending level.

Data Source: Illinois State Board of Education

*Graduation Rate

The graduation rate shows what percentage of students who start high school finish. Graduates have better job prospects, chances for higher earnings and lower rates of crime involvement.

The graduation rate is calculated by dividing the number of graduates in a given year by the first-time ninth-grade fall enrollment from three years previous (i.e. for 1999-00 graduates, fall 1996 enrollment). To account for mobility, the number of students who transferred out in interim years is subtracted and transfers in are added. Finally, the result is multiplied by 100.

Data Source: Illinois State Board of Education

ECONOMIC SECURITY

Self-Sufficiency Standard

The self-sufficiency standard calculates how much money working adults need to meet basic needs (including paying taxes) without receiving public subsidies—such as public housing, food stamps or Medicaid—or private/informal subsidies—such as free babysitting by a relative or friend, food provided by local food banks, or shared housing.

Unlike the federal poverty level, the self-sufficiency standard accounts for costs as they vary by family size and composition and by geographic location. Expenses include housing, child care, food, transportation, health care and taxes. Credits include the Earned Income Tax Credit, the Child Care Tax Credit and the Child Tax Credit.

Counties that have the notation *MSA show the self-sufficiency standard for the major city or cities (Metropolitan Statistical Area, as defined by the Census Bureau) included in the county, not the county as a whole. Typically, costs are higher in these urban areas. In some cases, a single city's costs of living are represented in multiple county figures (i.e. the Chicago MSA is part of Cook, DuPage, Lake, Kane, McHenry, and Will counties.) The different costs associated with different parts of the city are reflected by the different county figures. For Cook County as well as Chicago, the figure used was "Chicago downtown and selected northside areas." For Woodford County and St. Clair County, the two figures given in the standard for the county were averaged.

The self-sufficiency standard is provided for 70 family types. We chose to present data for a three-person family consisting of a parent, a preschooler and a school-age child and a four-person family consisting of two parents, a preschooler and a school-age child. A child's age is an important variable due to child care costs.

Data Source: Women Employed. For more information and for all 70 available family types, please visit www.womenemployed.org or contact Jenny Wittner at (312) 782-3902.

Affordable Housing

A safe, secure home is a basic necessity for achieving economic success, family security, emotional stability and a multitude of other goals. Housing costs in the United States, however, exceed what the majority of workers can truly afford and continue to increase.

Fair market rent, calculated annually by the U.S. Department of Housing and Urban Development, is essentially an average rent amount for an area. The fair market rent is used to calculate how much workers need to earn and how many hours they must work in order to attain affordable housing. Housing is considered affordable if it costs no more than 30 percent of a family's income.

The National Low Income Housing Coalition's "Out of Reach" report determined an Illinois worker earning minimum wage would have to work 116 hours a week in order to afford rent for a two-bedroom unit at fair market rent. About 500,000 Illinois workers, or 10 percent of the workforce, make minimum wage.

Data Source: National Low Income Housing Coalition

Children in Poverty

The statewide figure is from the 2000 Census Supplementary Survey for Illinois showing the number of related children under 18 years below the poverty threshold in the 14 months prior to December 2000. The county numbers are from the 1997 Small Area Income and Poverty Estimates from the Census Bureau. These are the most recent figures available by county since new county-level figures will not be released until summer 2002. Data are unavailable for Chicago.

Data Source: U.S. Census Bureau

Federal Poverty Threshold

The federal poverty threshold, calculated annually by the Office of Management and Budget, is meant to reflect the income level that can sustain a family's basic needs for a year. The poverty threshold has been widely criticized as being unrealistic. The Census Bureau is working on measures that more adequately reflect regional variations, family composition and an overall increased standard of living.

The poverty threshold shown here is not identical to the poverty guidelines the U.S. Department of Health and Human Services uses to determine eligibility for programs such as food stamps, but is based on the same premises. The federal poverty threshold counts income before taxes and does not include capital gains and non-cash benefits such as public housing, Medicaid and food stamps. In 2000, the federal poverty threshold for a family of four that included two related children under 18 was \$17,463, or about \$1,455 a month.

Data Source: U.S. Census Bureau

Median Household Income

Median household income shows the average yearly level of income for the householder and all other persons 15 years or older in the household, whether related to the householder or not.

The statewide data are from the 2000 Census Supplementary Survey and are provided in 2000 inflation-adjusted dollars. The county figures are estimates modeling 1997 income reported in the March 1998 Current Population Survey from the Census Bureau. Data are unavailable for Chicago.

Data Source: U.S. Census Bureau

Families and Children on TANF

Since the implementation of federal welfare reform in 1996, caseloads have dropped dramatically. Illinois reports a 78 percent drop in total cases from 1997 to 2001 and a 65 percent drop for children. The one exception is an increase in overall caseloads and children caseloads from 2000 to 2001 in about one-fifth of Illinois counties, perhaps as a result of the slowing economy.

Data are from September of each year. Total grantees refers to Temporary Assistance to Needy Families (TANF) recipients in the "available-to-work" category. Pregnant women, child-only cases and parents of young children are not included in "available-to-work" figures. "Children" refers to all children in any type of TANF cases.

Racial figures for grantees, however, are for the TANF MAG (Medical Assistance Grant) population. These cases (individuals or families) include those classified as available to work, child-only and

pregnant women. Racial data and overall county data do not exactly match due to different sources and run dates. Note that the racial configuration for data is slightly different than in other sections of the book.

Chicago figures for 1997 to 2000 are based on estimates using geocoding from the Cook County figures, provided by the Illinois Department of Human Services Chicago office. Figures for Chicago in 2001 are estimated from actual counts taken in March 2001.

Data Source: Illinois Department of Human Services

Child Support

Non-payment of child support is a primary reason that almost half a million children in Illinois receive welfare benefits. Parents who do not pay child support shift the cost of caring for their children to the taxpayers. By collecting child support, the Illinois Department of Public Aid lightens taxpayers' burdens.

Nationally, only 58 percent of all single-parent households have court orders for child support, and only half of those actually receive the support due to them.

Data are for FY 2001. Percentages were calculated by adding together all child support payments distributed and dividing by the amount of support due. In Brown County, the percent of support collected exceeds 100 percent as a result of money being collected at the end of one fiscal year and being distributed at the beginning of the next.

TANF child support cases include any children or families due support who are also on TANF during the year. In FY 2001, there were 1,031,881 total

cases with more than \$600 million due and \$240 million distributed. There were 148,894 TANF cases with more than \$20 million in child support due and almost \$6 million distributed. The total state figure includes more than 54,000 cases of interstate and unknown location.

Data Source: Illinois Department of Public Aid

Free and Reduced-Price Lunches

In order to make sure all children receive at least one balanced, nutritious meal each day, the National School Lunch program provides free lunches to children with incomes below 130 percent of the federal poverty level. Children whose families have incomes between 130 percent and 185 percent of the poverty level are eligible for reduced-price lunches. Given these eligibility criteria, this indicator is a good measure of child poverty.

More than 4,000 Illinois schools provide free and reduced-price lunches, including public schools, private schools, pre-primary classes (i.e. preK) and residential child care programs.

The data show the number of eligible students in each county, not the number of students who actually use the program on a given day. The data were collected on Oct. 31, 2000 and are self-reported from sponsors in the National School Lunch Program, so not every Illinois school is included. The figures were calculated by adding the number of children eligible for free lunches to the number of children eligible for reduced-price lunches and dividing by total enrollment.

Data Source: Illinois State Board of Education

SAFETY

Child Abuse and Neglect

Illinois saw a marked decline in child abuse and neglect cases between 1998 and 2000. Many counties, however, show increases in abuse and neglect rates that should be monitored.

Our data include all indicated cases, those in which DCFS found evidence that abuse or neglect occurred. This number is smaller than reported cases, some of which eventually prove unfounded. The data presented are for unduplicated counts, meaning that a child was only counted once during the year, regardless of the number of times an indication was made. Data are for calendar years.

Rates were calculated based on 2000 census data for the under-18 population. The total number of indicated cases for a given year in a county was divided by the 2000 population for that county and the result was multiplied by 1,000.

Data Source: Illinois Department of Children and Family Services

Child Deaths

Our data shows the number of gun related deaths in the five-year period from 1995-99, in addition to the overall child death rate for this time period. Firearm deaths include both accidental and intentional incidents. The death rate includes deaths from all causes among children. Data were calculated by adding all deaths for the five-year period for each county, dividing by the 1996 population of the county and multiplying by 10,000. Years were grouped in order to generate sufficient numbers to calculate rates.

Data Source: Illinois Department of Public Health

*Lead Poisoning

Children are at high risk for lead poisoning because their small bodies absorb more lead than those of adults and lead is more harmful to growing bodies. The effects of lead, which can be permanent, include learning disabilities, behavioral problems, lowered intelligence, stunted growth, hearing loss, and, at higher levels of concentration, even coma and death.

Elevated blood lead levels are those reading 10 mcg/dl. or greater and are reported by laboratories, physicians, hospitals and other health care providers for all children children 15 years old or younger. Almost all tests (94 percent) are on children 6 years old or younger that are reported to the Illinois Department of Public Health. The figure shown is the percentage of children tested who were found to have an elevated blood lead level. The testing numbers include children tested for the first time as well as those who are retested.

STATE, COUNTY AND CHICAGO DATA PAGES

Children of Illinois

The child population in Illinois grew 10 percent the past decade, from 2,946,366 children in 1990 to 3,245,451 children in 2000. Springfield is the capital of the fifth most populous state in the nation. The largest industry is manufacturing, and the unemployment rate was 5.0 percent in October 2001.

Positives: Decrease in substitute care rate, big increases in permanency placement rate and KidCare enrollment.

Concerns: High infant mortality rate among blacks, long list of children waiting for state pre-K programs, high housing costs.

Children of
Adams
County

Adams County experienced little change in child population between 1990 and 2000, with a slight decrease from 17,043 to 17,001. Quincy is the county seat. The largest industry is manufacturing and the unemployment rate was 3.7 percent in October 2001.

Positives: Decreases in the infant mortality rate and rate of children in substitute care.

Concerns: Percent of births to teens is increasing.

Children of Alexander County

Alexander County experienced a nearly 20 percent decline in its child population, from 3,065 children in 1990 to 2,474 in 2000. Its county seat is Cairo. The largest industry is manufacturing and the unemployment rate in October 2001 was 6.4 percent.

Positives: Low infant mortality rates, decrease in child abuse and neglect rate.

Concerns: High percent of births to teens, increase in percent of low birth weight babies.

Children of Calhoun County

Calhoun County had 1,164 children in 2000, compared with 1,291 children in 1990, a nearly 10 percent decrease. This western county has its county seat in Hardin. Retail trade is its largest industry and the unemployment rate in October 2001 was 3.6 percent.

Positives: Small class sizes, low percent of teens giving birth.
Concerns: High child death rate, increase in abuse and neglect rate.

Children of Christian County

Christian County saw a 2 percent decrease in its child population between 1990 and 2000, from 8,711 to 8,525 children. The county seat is Taylorville and the largest industry is manufacturing. The unemployment rate in October 2001 was 4.1 percent.

Positives: Sharp decline in the TANF caseload, large increase in KidCare enrollment.

Concerns: Low permanency placement rate, rising percent of low birth weight babies.

Children of Clark County

Clark County had 4,235 children in 2000, compared with 3,916 in 1990, a more than 8 percent increase. This eastern county has its county seat in Marshall. Manufacturing is its largest industry and the unemployment rate in October 2001 was 4.3 percent.

Positives: Decrease in kids with lead poisoning, most child care homes accept subsidies.

Concerns: Decrease in permanency rate, increase in substitute care rate.

Children of Cook County

Cook County, the state's most populous county, saw a 9 percent increase in child population between 1990 and 2000, from 1,280,045 children to 1,397,953. The largest industry is manufacturing. The unemployment rate in October 2001 was 5.7 percent.

Positives: Increase in KidCare enrollment, decrease in infant mortality.

Concerns: High rate of lead poisoning, high housing costs and low birth weight babies.

Children of Edgar County

Edgar County had 4,709 children in 2000, compared with 5,507 in 1990, a decrease of almost 15 percent. This eastern county has its country seat in Paris. Manufacturing is its largest industry and the unemployment rate in October 2001 was 4.1 percent.

Positives: Sharp decline in TANF caseload, increase in Kid-Care enrollment.

Concerns: Increase in percent of low birth weight babies, high number of single parents.

Children of Greene County

Greene County had 3,764 children in 2000, compared with 4,059 in 1990, a decrease of more than 7 percent. This western county has its county seat in Carrollton. Retail trade is its largest industry and the unemployment rate in October 2001 was 4.5 percent.

Positives: Increase in KidCare enrollment, decrease in percent of births to teens.

Concerns: High child death rate.

Children of Jersey County

Jersey County experienced little change in child population between 1990 and 2000, with a slight decrease from 5,503 to 5,504. Jerseyville is the county seat. The largest industry is retail trade and the unemployment rate was 5.2 percent in October 2001.

Positives: High permanency placement rate, high percent of child support distributed.

Concerns: Increase in abuse and neglect rate, increase in percent of births to teens.

Children of Lee County

Lee County experienced little change in child population between 1990 and 2000, with a slight decrease from 8,915 to 8,727. Dixon is the county seat. The largest industry is manufacturing and the unemployment rate was 3.8 percent in October 2001.

Positives: Decrease in infant mortality rate.

Concerns: Increase in percent of births to teens, increase in substitute care rate.

Children of Madison County

Madison County experienced little change in child population between 1990 and 2000, falling slightly from 63,748 to 64,476. Edwardsville is the county seat. The largest industry is manufacturing and the unemployment rate was 5.1 percent in October 2001.

Positives: Increase in accredited child care centers, rising KidCare enrollment.

Concerns: Number of gun-related deaths, high lead poisoning rates.

Children of
McDonough
County

McDonough County experienced a 10 percent decline in its child population, from 6,487 in 1990 to 5,827 in 2000. Its county seat is Macomb.

The largest industry is manufacturing and the unemployment rate in October 2001 was 2.1 percent.

Positives: Low unemployment, increase in KidCare enrollment, low infant mortality rate.

Concerns: High (but decreasing) percent of births to teens.

Children of Pope County

Pope County, the least-populated county, saw a 6 percent decrease in child population between 1990 and 2000, from 1,008 to 949. The county seat is Golconda and the largest industry is mining. The unemployment rate in October 2001 was 6.4 percent.

Positives: Low percent of teens giving birth, low child death rate.

Concerns: High unemployment, increase in substitute care rate.

Children of Sangamon County

Sangamon County's child population grew from 45,551 in 1990 to 47,238 in 2000. Springfield is the county seat of the 10th most populous county. Health care and social assistance is the leading industry and unemployment in October 2001 was 3.4 percent.

Positives: Increase in KidCare enrollment, decrease in substitute care rate.

Concerns: No accredited child care homes, high lead poisoning rate.

Children Who Contracted Vaccine-

Children of Schuyler County

Schuyler County experienced a nearly 11 percent decline in child population from 1,859 in 1990 to 1,661 in 2000. Its county seat is Rushville. The largest industry is health care and social assistance and the unemployment rate in October 2001 was 2.8 percent.

Positives: Increase in permanency placement rate, low unemployment rate.

Concerns: Increase in abuse and neglect rate, low TANF child support distribution.

Children of Washington County

Washington County experienced little change in child population between 1990 and 2000, with a slight decrease from 3,931 to 3,832. Nashville is the county seat. The largest industry is manufacturing and the unemployment rate was 2.9 percent in October 2001.

Positives: Low percent of low birth weight babies, increase in KidCare enrollment.

Concerns: Low TANF child support distribution.

Children of Williamson County

Williamson County experienced little change in child population between 1990 and 2000, increasing slightly from 13,835 to 14,038. Marion is the county seat. The largest industry is retail trade and the unemployment rate was 4.4 percent in October 2001.

Positives: Decrease in percent of low birth weight babies, small high school class sizes.

Concerns: Increase in abuse and neglect rate.

Children of
Winnebago
County

Winnebago County's child population grew 11 percent, from 66,304 in 1990 to 73,502 in 2000. Rockford is the county seat of the sixth most populous county. Manufacturing is the leading industry and the unemployment rate in October 2001 was 6.5 percent.

Positives: Decrease in infant mortality rate.
Concerns: High unemployment, high number of gun-related deaths.

THE CHARTER FOR ILLINOIS CHILDREN

We are committed to the well being of every child. All children, regardless of circumstances, are vital to the preservation of a vigorous democracy. For children to prosper, we must meet all their basic needs. We must nurture each child through the full and active participation of families and the broader community, including neighborhoods, schools, business, faith communities and government. When children realize their potential and fulfill their dreams, our communities flourish and we are enriched beyond measure.

We believe in these values and principles and commit to work together to secure the goals of this charter for all the children of Illinois:

- Childhood is a sacred time that should be nurtured, celebrated and preserved.
- Children's basic needs are family, safety, health, education, economic security and arts, recreation and culture.
- All children need to know they belong to loving families and caring communities.
- Just as families must support children, communities must support families, and government and business must support both.
- All children deserve safe homes, safe schools and safe communities.
- Our children's sense of hope and possibility requires equal access to appropriate resources.
- Children are prepared for the future when we teach them and they learn to honor and respect diversity.

294

EDUCATION

Our Vision: All children receive, as a right, free quality education that fosters their intellectual, social, emotional, physical, spiritual, cultural and creative development.

Goals:

- Foster learning beginning at birth
- Respect and support family as the child's first teacher
- Value and invest in teachers as a key component of every child's development
- Create an educational system that is a partnership of family, community, and school
- Respect and provide for each child's differences and capacities to learn
- Support an equitable, fully-funded system that prepares every child for lifelong learning
- Provide safe, excellent, well-funded schools in every community
- Develop the use of schools as community resources during and beyond school hours
- Teach children to understand and respect diversity, multiple cultures and languages, and a global perspective

295

- As children mature, we must seek their voices, engage them, and recognize the freedom they need to shape their destinies.

- Children can learn from their mistakes. They deserve systems that give them that opportunity.

- Each child is unique.

- Every child is entitled to respect.

- We must never give up on any child.

FAMILY

Our Vision: All children are part of loving and safe families. All segments of society share responsibility for supporting families in raising their children and future generations.

Goals:

- Protect the dignity and value the diversity of every family
- Respect and preserve the child's bond and covenant with parents, family and community
- Support children's moral, spiritual and ethical development
- Provide families with the skills, knowledge and resources to develop, support and sustain loving homes
- Empower families to balance the demands of parenting, work and education
- Encourage parents to be active in the democratic process and promote the interests of children and families

ARTS, RECREATION AND CULTURE

Our Vision: All children can express and celebrate their souls and spirits through arts, culture and recreation. Children have open time to dream, play and create.

Goals:

- Integrate arts, culture and recreation into the core curriculum of education
- Provide access to a wide variety of affordable, quality arts, culture and recreational programs for children of all ages
- Create ongoing opportunities to discover, recover, preserve and celebrate traditions across cultures
- Ensure that museums, libraries, parks and diverse cultural resources are accessible to all children

HEALTH

Our Vision: Every child and family is guaranteed quality, comprehensive health care. All children live in a healthy environment that allows them to thrive.

Goals:

- Ensure that no children go hungry
- Ensure quality prenatal care is available for all
- Implement an effective health and nutrition education curriculum

- Provide integrated, accessible and high-quality mental health care
- Focus on prevention as a key to preserving the health and well-being of children
- Develop partnerships for clean air, water, land and a healthy ecosystem

SAFETY

Our Vision: Every child lives in a physically and emotionally safe environment that cultivates acceptance and peace.

Goals:

- Promote and ensure safe, non-violent family and community environments
- Protect children from the dangers confronting them
- Eliminate children's access to handguns
- Teach and practice conflict resolution in all segments of society
- Promote social justice through the elimination of prejudice and discrimination
- Invest in prevention and intervention programs through legislation, funding, evaluation and research
- Increase safe indoor and outdoor neighborhood recreational activities
- Promote non-violent, positive images that reflect diversity
- Ensure equal protection and due process of law for all children and youth in a system which recognizes their differing capacities and promotes rehabilitation and learning

ECONOMIC SECURITY

Our Vision: All children have economic security and economic justice: Meaning access to food, clothing, transportation and safe, affordable housing, and that all families have equal opportunities to provide these basic economic needs.

Goals:

- Provide family-friendly policies in the workplace
- Develop a fair tax policy
- Cultivate marketable job skills through training and education
- Provide accessible, affordable, high-quality child care
- Promote corporate partnerships that strengthen communities
- Provide economic security through government initiatives for the children whose parents cannot support them
- Enhance access to jobs through sound policies for housing and transportation

THE CHARTER FOR

ILLINOIS CHILDREN

ACKNOWLEDGEMENTS

"Illinois Kids Count 2002: Supporting the Changing Family" was funded by the Annie E. Casey Foundation, the nation's largest philanthropy devoted exclusively to disadvantaged children. Illinois Kids Count is part of the national KIDS COUNT Project to provide information about children and families in a manner that creates a deeper public understanding and establishes guidelines for holding each of us accountable to the goals we set for our children. Voices for Illinois Children gratefully acknowledges the support of the Casey Foundation and its project staff: Francine Brown, Don Cray, Bill O'Hare and Megan Reynolds. The Illinois Kids Count Project is directed by Julie Zasadny.

This report was designed by Pinzke Design and Desktop Edit Shop Inc. and was printed by Kokopelli Communications Group Inc. Special thanks to Jim McGowan at Desktop, Nancy Pinzke at Pinzke Design and Craig Ehl at Kokopelli for their help and advice. Additional photos were

provided by Julie Dryden at the Coles County Health Department, the Watters family, Betty DuPre at Parker Early Education Center and Cindy Roope at the Adams County Health Department.

We would like to acknowledge the following people who helped us collect the data on the status of Illinois children and without whom this report would not be possible: Jenny Wittner and Rachel Unruh at Women Employed; Nancy Rolock and Mark Testa at the Illinois Department of Children and Family Services; Kae Hunt and Gary Morgan at the Illinois Department of Public Health; Judith Deane at the Administration for Children and Families, Head Start Branch; Kay Henderson, Kalpana Desai, and Shuwan Chiu at the Illinois State Board of Education; Gerald VonDeBur and Rick Forshee at the Illinois Health Care Cost Containment Council; Jennifer Parker at the Illinois Network of Child Care Resource and Referral Agencies; Yvonne Boyd and Barbara Gaynor at the Illinois Department of Human Services; Sue Gansky at the Illinois Department of Public Aid; David Scoville at the Illinois Public Aid Child Support Program; Jennifer Twombly at the National Low-Income Housing Coalition; Janet Gully at the Illinois Department of Human Services, Bureau of Early Intervention; and John Comerio at the Illinois Association of Park Districts.

We would like to thank the members of the Illinois Kids Count Advisory Committee for their hard work and advice. Finally, we'd like to thank Julie Dryden at the Coles County Health Department, the Watters family, Karen Washington, Betty DuPre at Parker Early Education Center and Cindy Roope at the Adams County Health Department Teen REACH program for being interviewed for this report.

"Illinois Kids Count 2002: Supporting the Changing Family" was written by Trisha Parker, Lindsay Warner and Julie Zasadny of Voices for Illinois Children, with help from the entire staff at Voices. The viewpoints expressed in this report are solely the responsibility of Voices for Illinois Children.
